SAFEGUARDING CORNER

Safeguarding Corner

Vaping

The national news regularly reports on the worrying increase in children vaping and last year we shared information with all parents on at least one occasion. We know that in some cases unregulated vapes themselves are alleged to contain lead at their tips which can potentially lead to lead poisoning every time the person puts it to their lips. That is before you start to consider the long term negative health impact and the ways in which people potentially progress from vaping to other things. As adults we fully appreciate that in the 1950's people were smoking cigarettes without any understanding of the damage they were doing - and we now all know just how much damage they do. Vapes could well be similar as so much is not yet fully understood.

As we often do in safeguarding corner, we are referencing an external source of information for you to look through when talking with your children, should you wish to use it ;
